

CLT4 Digital Air Pressure Inlet Control

Air pressure control joins the digital age, based on *Climatec's* tried and tested air pressure control unit. The CLT4 digital version replaces our 25 year old analogue unit.

- Large display shows current pressure.
- Can operate up to two inlet drives with position feedback.
- Easy feedback potentiometer calibration procedure.
- All settings are easily adjustable.
- Minimum and maximum controls tie in to the fans stages.
 - Inlets will open immediately to the minimum position setting when the first stage (cycle timer) fans switch on.
 - Maximum position will automatically be set to 100% as the ventilation control advances up through the stages.
- Option to have the pressure control operate a different pressure setting via external contact. e.g. higher pressure setting for cold nights.
- Can be used to upgrade existing *Climatec* air pressure controls for minimal cost.
- Available as:
 - Panel mount.
